Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 39-41 are rejected under 35 U.S.C. 102(b) as being anticipated by Engelson-5944733.

Engelson discloses a method of filling an abnormal void (aneurysm) including placing a catheter into the vessel and aneurysm, passing a first space occupying element 102 which has a volume and a second element 104 and a binding agent 110 out of the distal end of the catheter and into the aneurysm and subjecting the binding agent to a softening agent (current) and then releasing the elements into the aneurysm. The binding agent would cause the overall device to be less flexible.

Claims 39-41 are rejected under 35 U.S.C. 102(b) as being anticipated by Ritchart-4994069.

Ritchart discloses placing a catheter into an aneurysm and ejecting a coil (first element 30) and 2nd elements 32 into an aneurysm a filling space therein. Inside and outside the coil is a binding agent 36 which when placed into the aneurysm will soften due to interaction with body fluids and allow the coil to become more flexible.

Application/Control Number: 10/622,437

Art Unit: 3731

Claims 39-41 are rejected under 35 U.S.C. 102(e) as being anticipated by Berenstein, et al.-6458119.

Berenstein discloses a method of filling an aneurysm by placing a catheter into the aneurysm and injecting a vasoocclusive coil into the aneurysm. The coil consists of chain links as shown in fig. 6B which are the claimed elements and which are rotatable relative to each other. Also, a binding agent 602 would cause the chain coil to exhibit less flexibility compared to if it were not present.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

The factual inquiries set forth in *Graham* v. *John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

- 1. Determining the scope and contents of the prior art.
- 2. Ascertaining the differences between the prior art and the claims at issue.
- 3. Resolving the level of ordinary skill in the pertinent art.
- 4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation

Art Unit: 3731

under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 42-44 are rejected under 35 U.S.C. 103(a) as being unpatentable over Berenstein, et al.-119 in view of Ritchart-'069.

Berenstein discloses the invention as claimed with the exception of the binding agent being a coating. Ritchart discloses a coated binding agent 36. It would have been obvious to have added the binding agent of Ritchart to the coil of Berenstein in order to keep the coil relatively straight during its expulsion from the lumen of the catheter.

Claims 39-44 are rejected under 35 U.S.C. 103(a) as being unpatentable over Palermo, et al.-5925059 in view of Ritchart-'069

Palermo discloses a method of filling an aneurysm wherein two coils which are rotatable relative to each other are introduced via a catheter into the aneurysm. However, a coated binding agent is not disclosed. Ritchart discloses a binding agent 36 for a vasoocclusive soil. It would have been obvious to have coated all of the coils and the connectors with the coating of Ritchart, as it would act to keep all of the coils relatively straight during introduction through the catheter. Following introduction, the body fluids act on the binding agent and soften it to allow the coil to attain its curved coiled configuration in the aneurysm filling the aneurysm.

Art Unit: 3731

Response to Arguments

Applicant's arguments with respect to claims 39-44 have been considered but are most in view of the new ground(s) of rejection.

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Glenn K. Dawson whose telephone number is 571-272-4694. The examiner can normally be reached on M-Th 7:30-5:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Anhtuan T. Nguyen can be reached on 571-272-4963. The fax phone

Art Unit: 3731

number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
